COMPETENCIES

Resilience
Teamwork
Responsibility
Work under pressure
Problem resolution
Creativity
Leadership
Autodidact

ABOUT ME

I am a Full Stack developer capable of carrying out web projects always keeping in mind that they are scalable and modular to achieve quality projects.

I am a curious developer with great problem-solving skills and above all a developer who is always willing to teach and learn from others.

ACADEMIC EXPERIENCE

• SOLO PROJECT FULL STACK DEVELOPER

2022 - 2022 | Henry

A web application was developed with the theme of dog breeds, where the main language of the application is JavaScript. The Front-End was made with React and its states were managed with Redux, the Back-End was managed with the Express library with its database worked with Sequelize and PostgreSQL.

The application allows you to sort alphabetically and by weight also ascending and descending, it has the function of filtering information by different characteristics of the breeds. Finally, it also allows you to create a new breed of dog through a form controlled with JavaScript.

• SOTELINO GALLERY

2022 - 2022 | Henry

Sotelino Gallery is an e-commerce focused on the sale of works of art by a single artist. Sotelino is an Argentine painter with more than 40 years of experience, he has decided that it is time for his works by him to be part of the digital world.

We are a team of six developers who brought this app to life in a limited time of three weeks, using agile methods to coordinate work.

In those three weeks I developed security in the Backend part with the PassportJs Library, using different strategies such as local and Jason Web Token, I also developed many of the routes used in the Frontend for managing user and product information. Always respect the sensitive information of users such as their passwords, which were kept encrypted and the change of those could only be confirmed by a Gmail, thanks to the NodeMailer library that reached the user. On the Frontend side, I handled the part of the forms which I controlled with JavaScript and styled with the styled-components library. Also, handle other styles like on product detail page and navbar.

ACADEMIC TRAINING

FULL STACK DEVELOPER

Henry Bootcamp | January 2022 - Present
- Intensive Bootcamp +800hs

SOFTWARE ENGINEER

Politecnico Grancolombiano University | January 2020 - Present
- I am trained on strong bases in algorithms and data structure management.
